● **General Description**

| Item | Standard Value | Unit |
|-----------------------|-------------------------------|---------|
| LCD Type | Transmissive TFT , 262K color | --- |
| Number of Dots | 240X(RGB)X320 | --- |
| Viewing Direction | ALL | o'clock |
| LCM Outline Dimension | 35.66(H) X 52.36(W) X2.97 (T) | mm |
| Active area | 30.60(W) X40.80 (H) | mm |
| Operating temperature | -20℃~70℃ | --- |
| Storage temperature | -30℃~80℃ | --- |
| CTP IC | GT911 | |
| Driving IC | ST7789V | --- |
| Approx. weight | TBD | g |

◆ BLOCK DIAGRAM

◆ ABSOLUTE MAXIMUM RATINGS

| Item | Symbol | Rating | Unit |
|--------------------------|-----------|----------|------|
| Operating temperature | Top | -20-70 | °C |
| Storage temperature | Tst | -30-80 | °C |
| Input voltage | Vin | -0.3-3.3 | V |
| Supply voltage for logic | VCC | -0.3-3.3 | V |
| Driver supply voltage | VGH - VGL | 0-30.0 | V |

NOTE:

1. If the module is used above these absolute maximum ratings. It may become permanently damaged. Using the module within the following electrical characteristic conditions are also exceeded, the module will malfunction and cause poor reliability.
2. VCC>GND must be maintained.

Note 1: Ambient temperature = 25 ± 2 °C;

Note 2: To be measured in the dark room;

Note 3: To be measured at the center area of the panel with a view cone of 1° by BM-7, after 10 minutes operation (module).

FLG1

Note 4: Define the response time:

The output signals of photo detector are measured when the input signals are changed from “black” to “white”(falling time) and from “white” to “black”(rising time), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

FLG2

Note 5: Contrast Ratio (CR) is defined mathematically as For more information from FLG3

$$\text{Contrast Ratio} = \frac{\text{Average surface luminance with all white pixel (P1,P2,P3,P4,P5,P6,P7,P8,P9)}}{\text{Average surface luminance with all black pixel (P1,P2,P3,P4,P5,P6,P7,P8,P9)}}$$

Note 6: Surface luminance is the center point across the LCD surface 500mm from the surface with all pixel displaying white, For more information see the FLG3

$$L_v = \text{Average Surface luminance with all white pixel(P1,P2,P3,P4,P5,P6,P7,P8,P9)}$$

Note 7: The uniformity in surface luminance, δ white is determined by measuring luminance at each test position 1 to 5, and then dividing the maximum luminance of 5 points luminance by minimum luminance of 5 points luminance. For more information see FLG3.

$$\delta \text{ WHITE} = \frac{\text{Minimum surface luminance with all white pixel(P1,P2,P3,P4,P5,P6,P7,P8,P9)}}{\text{Maximum surface luminance with all white pixel(P1,P2,P3,P4,P5,P6,P7,P8,P9)}}$$

Note 8: CIE(X, Y), the X, Y value is determined by measuring luminance at each test position 1 to 5, and then make average value. For more information see FLG3.

H,V: Active area
Light source spot size: $\Phi=2.0\text{mm}$
Measure device: BM-7

FLG3

Note 9: Viewing angle is the angle at which the contrast ratio is greater than 2, TFT module the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the

vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see the FLG 4.

| 8 | Vibration test | Endurance test applying the vibration during transportation and using | Frequency:10Hz~55Hz~10Hz Amplitude:1.5mm X,Y,Z direction for total 3hours (parking condition) |
| 9 | Fall test | Endurance test dropping the LCM from a high place | 600mm height |
| 10 | Static electricity test | Endurance test applying static electric stress to terminal | Air discharge 10 times R=330Ω, C=150pF. ±8KV Remark: if malfunction can be recovered to normal state after reset or power on, it will be judged to be a good part |

◆ SPECIFICATION OF QUALITY ASSURANCE

● Summary

The customer should check and accept the products of Gold Fame within one month after reception. This standard for Quality Assurance should affirm the quality of LCD products to supply to purchaser by Gold Fame. Entire process is controlled according to ISO9000.

● Standard for quality test

1、 Inspection

Before delivering, the supplier should take the following tests, and affirm the quality of product.

2、 Electro-Optical Characteristics

According to the individual specification to test the product.

3、 Test of Appearance Characteristics:

According to the individual specification to test the product.

4、 Test of Reliability Characteristics

According to the definition of reliability on specification for test product.

5、 Delivery Test

Before delivering, the supplier should take the delivery test

6、 Sampling Method: GB/T2828.1-2003, Level II

7、 The defects classify of AQL as following

Major defect: AQL=0.65

Minor defect: AQL=1.5

● Nonconforming Analysis & Deal With Manners

✧ Nonconforming Analysis

1、 Purchaser should supply the detail data of nonconforming sample and the non-suitable state.

2、 After accepting the detail data from purchaser ,the analysis of nonconforming should be finished in two weeks.

3、 If supplier can not finish analysis on time ,must announce purchaser before two weeks.

✧ Disposition of nonconforming

1、 If find any supplier defect during assembly line, supplier must change the good product for every defect after recognition.

2、 Both supplier and customer should analysis the reason and discuss the disposition of nonconforming when the reason of nonconforming is not sure.

● Agreement items.

Both sides should discuss together when the following problems happen:

1、 There is any problem of standard of quality assurance ,and both sides think that must be modifier.

2、 There is any argument item which does not record in the quality assurance.

3、 Any other special problem.

● Standard of the Product Appearance Test

■ Manner of appearance test

1、 The test must be under 20W*2 or 40W fluorescent light ,and the distance of view must be at 30±5 cm.

- 2、 When test the model of Transmissive product must add the reflective plate.
- 3、 The test direction is base on about around 30 degree(within θ range)of vertical line.

4、 Definition of Area:

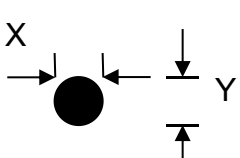

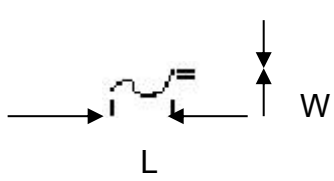

- A Area: Active area
- B Area: Viewing area
- C Area: Out of viewing area
- D Area: Seal area

■ Basic principle:

- 1、 It will accord to the AQL when the standard can not be described.
- 2、 The sample of the lowest acceptable quality level must be discussed by both supplier and customer when any dispute happened.
- 3、 Must add new item on time when it is necessary.

◆ **SUGGESTIONS FOR USING LCD MODULES**

● Handling of LCM

- (1) The LCD screen is made of glass. Don't give excessive external shock, or drop from a high place.
- (2) If the LCD screen is damaged and the liquid crystal leaks out, do not lick and swallow. When the liquid is attach to your hand, skin, cloth etc, wash it off by using soap and water thoroughly and immediately.
- (3) Don't apply excessive force on the surface of the LCM.
- (4) If the surface is contaminated ,clean it with soft cloth. If the LCM is severely contaminated , use Isopropyl alcohol/Ethyl alcohol to clean. Other solvents may damage the polarizer . The following solvents is especially prohibited: water , ketone Aromatic solvents etc.
- (5) Exercise care to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or a current flow in a high-humidity environment.
- (6) Install the LCD Module by using the mounting holes. When mounting the LCD module make sure it is free of twisting, warping and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
- (7) Don't disassemble the LCM.
- (8) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - Be sure to ground the body when handling the LCD modules.
 - Tools required for assembling, such as soldering irons, must be properly grounded.
 - To reduce the amount of static electricity generated, do not conduct assembling and other work under dry conditions.
 - The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.
- (9) Do not alter, modify or change the the shape of the tab on the metal frame.
- (10) Do not make extra holes on the printed circuit board, modify its shape or change the positions of components to be attached.
- (11) Do not damage or modify the pattern writing on the printed circuit board.
- (12) Absolutely do not modify the zebra rubber strip (conductive rubber) or heat seal connector
- (13) Except for soldering the interface, do not make any alterations or modifications with a soldering iron.
- (14) Do not drop, bend or twist LCM.

● Storage

- (1) Store in an ambient temperature of 5 to 45 C, and in a relative humidity of 40% to 60%. Don't expose to sunlight or fluorescent light.
- (2) Storage in a clean environment, free from dust, active gas, and solvent.
- (3) Store in antistatic container.

- **Limited Warranty**

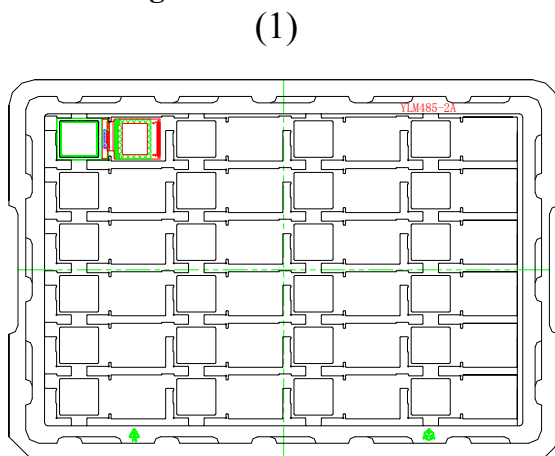

Unless agreed between GOLDFAME and customer, GOLDFAME will replace or repair any of it's LCD modules with are found to be functionally defective when inspected in accordance with GOLDFAME LCD acceptance standards(copies available upon request)for a period of one year from Date of shipment .Cosmetic/visual defects must be returned to GOLDFAME within 90 days of shipment .Confirmation of such date shall be based on freight documents. The warranty liability of GOLDFAME limited to repair and/or replacement on the terms above. GOLDFAME will not be responsible for any subsequent or consequential events

(5)

(6)

(7)

(8)

- (1). Put module into tray cavity :
- (2). Tray stacking
- (3). Put 1 cardboard under the tray stack and 1 cardboard above:
- (4). Fix the cardboard to the tray stack with adhesive tape:
- (5). Put the tray stack and 4 pcs desiccant into the LDPE bag
- (6). Fix the LDPE bag with adhesive tape:

- (7). Put LDPE bag with tray stack into carton.:
- (8). Carton sealing with adhesive tape.
